RE: COORSTEK CONFLICT MINERALS STATEMENT

To whom it may concern,

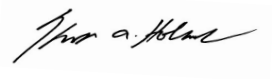
During CoorsTek's most recent Conflict Minerals and Extended Minerals Reporting campaign, several smelters identified as High Risk were disclosed within supplier submissions. These smelters were reported by suppliers as part of their commitment to transparency and compliance with applicable mineral sourcing and reporting requirements.

CoorsTek conducted a review of these disclosures and engaged directly with the affected suppliers. Based on supplier confirmations and supporting due diligence processes, CoorsTek verified that no materials supplied to CoorsTek originated from a smelter that was classified as High Risk at the time of sourcing or procurement.

In instances where a smelter's status changed to High Risk during the reporting period, suppliers confirmed that the materials supplied to CoorsTek were not sourced from those smelters.

As a result, while High Risk smelters may appear in CoorsTek's Conflict Minerals or Extended Minerals Reports due to supplier disclosure practices, CoorsTek has verified that the materials supplied to the company were not sourced from these smelters while they were designated as High Risk. CoorsTek remains committed to responsible sourcing and ongoing due diligence throughout its supply chain.

Sincerely,



Kurt A. Hollasch
